### Symbols

The following standard symbols are used in Statistics Canada publications:

- ... figures not appropriate or not applicable
- amount too small to be expressed

### Note

The figures, including totals, shown in this report are randomly rounded (either up or down) to a multiple of "5". Since totals are independently rounded, they do not necessarily equal the sum of individual rounded figures in distributions.

## 1. Background

In May, 1980, the Special Parliamentary Committee on the Disabled and the Handicapped was formed with the mandate to report to the House of Commons on the needs and concerns of disabled persons in Canada. In February, 1981, the Committee published its findings in the report titled **Obstacles**. This report included 130 recommendations for action on the part of the Government of Canada.

It was noted throughout the Committee's investigations that there was a lack of national data on disabled persons. Therefore, the Committee directed Statistics Canada, through Recommendation 113, "to give a high priority to the development and implementation of long-term strategy which will generate comprehensive data on disabled persons in Canada..."<sup>1</sup>

Statistics Canada responded with an action plan which outlined the major activities to be undertaken to build a national database on disability - a database that would include all types of disabilities and all geographic areas in Canada.

Representatives from federal, provincial and territorial departments, agencies, crown corporations, and associations of and for disabled persons were contacted to determine their specific data requirements.

Statistics Canada then undertook three major data collection activities. They were:

- (1) the conduct of the Canadian Health and Disability Survey (CHDS) as a Supplement to the Labour Force Survey in October, 1983 and June, 1984;
- (2) the addition of a question on activity limitation on the 1986 Census of Population questionnaire to assist Statistics Canada in designing a sample frame from which to select individuals for participation in the post-censal survey, the Health and Activity Limitation Survey; and
- (3) the conduct of the Health and Activity Limitation Survey (HALS) which was completed in households in the fall of 1986 and in institutions in the spring of 1987.

## 2. Objectives of the Health and Activity Limitation Survey

The objectives of HALS were:

- (1) to extend the coverage of the survey to include disabled persons residing in the Yukon, the Northwest Territories, on Indian Reserves and in institutions;
- (2) to interview a sufficient number of disabled persons to enable the release of data for sub-provincial areas (such as large municipalities and groups of small municipalities) as well as data on disabilities with a low prevalence (such as Alzheimer's disease); and
- (3) to extend the definition of disability to include individuals whose disability was due solely to the presence of a psychiatric condition.

## 3. Disability Defined

*"In the context of health experience, a disability is any restriction or lack (resulting from an impairment) of ability to perform an activity in the manner or within the range considered normal for a human being."*<sup>2</sup>

With the development of the International Classification of Impairments, Disabilities and Handicaps, the World Health Organization has developed a framework within which one can measure the consequence of disease. The "disability" concept was operationalized through a series of questions that has come to be known as "Activities of Daily Living".<sup>3</sup>

For the purpose of the national database on disability, the functional limitation approach has been utilized for the adult population (aged 15 and older) through the use of a modified version of the "Activities of Daily Living" questions. Individuals are not considered disabled if they use a technical aid and that aid completely eliminates the limitation, e.g. - an individual who uses a hearing aid and states that he has no limitation when using the aid would not be included in the database. The concept of time has also been added as an additional parameter - the limitation has to be of a minimum six months duration,

## The Health and Activity Limitation Survey

---

i.e. has lasted or is expected to last six months or more.

For children under the age of 15, the two surveys (CHDS and HALS) used a general limitation approach along with a list of chronic conditions and a list of technical aids. A positive response in any one of these three categories indicates a disability.

### 4. Sample Design and Data Collection

**H**ALS is comprised of two surveys - the household survey, which was conducted immediately following the 1986 Census of Population and the institutions survey, which was conducted in the spring of 1987.

#### The Household Survey

The sample design<sup>4</sup> of the household survey was a multi-stage stratified sample using the geography and information from the 1986 Census of Population questionnaires. Respondents were selected based on their age (three age groupings - under 15, 15 to 64, and 65 and over) and their response to the Census question on disability.

Approximately 1,200 Census Representatives were retained to conduct the interviews with the selected individuals. These Census Representatives received additional training on the survey content and procedures.

Personal interviews were conducted with approximately 120,000 individuals who had responded "Yes" to the Census question on disability. The parent or guardian was interviewed for the sample of children under the age of 15. Telephone interviews were conducted with approximately 80,000 individuals who had responded "No" to the Census question.

#### The Institutions Survey

The 1986 Census of Population provided the list of institutions in Canada which was used for the first stage of selection for the institutions survey. From this list, five types of institutions were chosen for inclusion in HALS. They were orphanages and children's homes, special care homes and institutions for the elderly and chronically ill, general hospitals,

psychiatric institutions, and treatment centres and institutions for the physically handicapped.

A sample of institutions was selected based on type and size (i.e. - number of permanent residents at the time of the Census).

Within each selected institution, a sample of residents was selected, based on a listing provided by the institution.

The preferred collection methodology was a personal interview with the selected individual. If, however, the selected individual was unable to respond for him/herself, a proxy interview was conducted with a staff member or next-of-kin. Experienced Statistics Canada interviewers were used for this survey.

### 5. Data Limitations

**A**ll of the HALS questionnaires were subjected to a complex computer editing in which the validity and consistency of the responses were checked. Missing or erroneous data were identified as "unknown" or, in some cases, were imputed using the other information contained in the same questionnaire.

Some data have been suppressed because the number estimated has a coefficient of variation exceeding 25% and is not regarded as being of sufficient precision to be published.

1. **Obstacles**, Report of the Special Parliamentary Committee on the Disabled and the Handicapped, February, 1981 - page 131.

2. **International Classification of Impairments, Disabilities, and Handicaps**, World Health Organization, 1980 - page 143.

3. **Special Study No. 5, Measuring Disability**, O.E.C.D., 1982.

4. The sample design has been documented and is available from HALS, Ottawa, (613) 951-4531.

## 6. Order Form

**To order your FREE copy of User's Guide for HALS  
please send your complete name and address to:**

The Health and Activity Limitation Survey  
Statistics Canada  
3D-2 Jean Talon Building  
Tunney's Pasture  
Ottawa, Ontario  
K1A 0T6

---

**This guide contains:**

- background information about the survey
- a summary of the survey methodology
- copies of all questionnaires
- a description of other disability data products and instructions for ordering them

---

**Please provide:**

- *name (and title, if applicable)*
- *organization*
- *mailing address*
- *province*
- *postal code*
- *telephone number*
- *language preference (English or French)*
